

# Child Guardian versus GPS

Child guardian has been designed mainly for watching children under 5 years old , when they have not full capability to appreciate a danger. In most cases, it is used for the peace of mind of people when they are accompanied by a child outside the house.

Network	No (except for messages)	GSM or WIFI

*\*\*in some countries , gsm/wifi is forbidden close to babies*

*\*usa : fee can be included in purchase price*

# Child Guardian versus GPS

*safety above all*

Child guardian has been designed to offer the best safety conditions to the children :

- 1- Child Guardian alerts you before the child is **too far from you**,
- 2- Child Guardian watches the child even **when you are walking together** outside or inside,
- 3- Child Guardian alerts you when it is **broken** by anybody else,
- 4- Child Guardian alerts you when **no movement** (for instance when detached from the baby),
- 5- Child Guardian needs **neither GSM nor WIFI**,
- 6- Child Guardian works **several months** without recharging batteries depending on the use and the battery.

Child Guardian will indicate you neither the child's location nor the direction.

Warning for use with iPhone :

Monitoring can be delayed when the Bluebeep application is placed in the background, for example when a second application is opened, when the phone is in sleep or lock mode.
